NOXON iRadio Cube

Internetradio / FM-Radio / Network-Audioplayer

The cube is cast

The new model from the NOXON series makes listening to the radio fun!

With the new NOXON iRadio Cube you can bring the whole world of modern radio into your home: Your familiar **FM radio stations** are just as easily received as the **11,000 plus Internet radio stations** from all over the world, all available free of charge. With such an extensive choice, a clearly arranged sorting system according to country and genre helps. There is something to be found for everyone. Guaranteed. Once you have found some favourites, they can be stored on programme keys and easily retrieved again. The computer simply remains switched off.

But there are even more options:
Podcasts, media contributions regarding the most varied of topics from the worlds of entertainment, politics and culture, as well as pre-produced radio programmes, can be accessed at all times, whenever you want. The clearly arranged directory helps here too. Never again will you miss the most recent podcast from your favourite comedian, the latest news bulletin from the BBC or any of the over 4,000 further offerings from around the world. Give it a try, there's so much to discover!

You want to listen to **music from your hard drive**? Be our guest – NOXON is a distinctive network player which allows for the easy operation of software on your PC or Mac. To do this, the computer must be switched on. On the NOXON, simply choose a title from your music library. The structure is displayed as it appears on your computer, enabling you to browse the directory as easily as you would on your own PC. This naturally also applies for a Network Attached Storage (NAS).

Regardless of what you are listening to, there is a **2.1 loudspeaker system** integrated into the high-quality, piano lacquer finish casing which caters for an extensive taste in music. And when the party really gets going at home, connect up the loudspeakers or even go all out with a HiFi system using a line-out port.

Security and compatibility are always top priority. All current music formats (including DRM10 for songs from Musicload and other providers), WLAN standards and encryptions (WEP, WPA, WPA2) are supported.

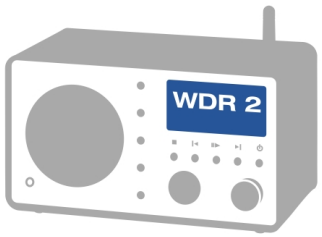
INTERNETradio

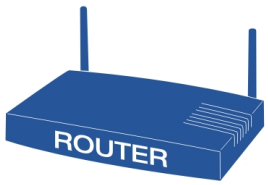
What is Internet Radio?



An Internet radio is the modern short-wave radio of today.
Listen to radio stations from all over the world via the Internet.
And in digital quality too. There will be no interference to disturb your enjoyment of programmes transmitted from far away holiday destinations or places a little more closer to home.
And not once do you need a computer.
The operation is just as easy as with a conventional radio:
once set up, simply switch on the Internet radio, choose a station and you're done!
Over 10,000 stations from all over the world broadcast via the Internet. And this number is increasing on a daily basis.
You will definitely find something to suit you!

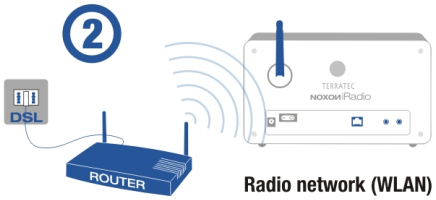
Internet radio is as simple as follows:

①

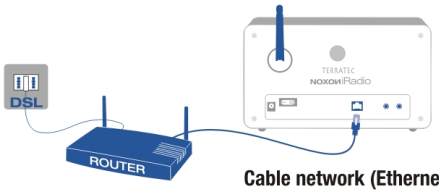


You need
- a DSL line
- a router for a wired network (Ethernet)
  or wireless network (WLAN)
  (most routers are suitable for both standards)
- a NOXON Internet radio

②



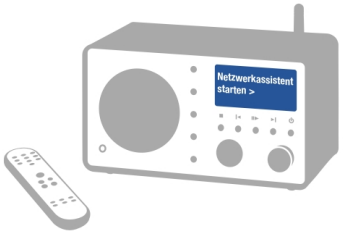
Radio network (WLAN)



Cable network (Ethernet)

And it is just as simple to connect

③



Routers and Internet radio are combined together in the network: Here the practical network assistant in the display helps to easily enter the values using the remote control, confirm and allow the aural pleasure to commence.

mynoxon

With immediate effect the NOXON series offers a multitude of never before seen content. Besides thousands of Internet radios and podcasts as well as songs from your hard drive, each NOXON can access exciting new services simply and comfortably steered via the portal www.my-noxon.com.

AUPEO! is your personal Internet radio station; it's your music taste which determines the programme! You can access a multitude of individual, as well as pre-set, music stations and can further personalise these stations at any time according to your own preferences.

For lovers of classical music the doors at Classical.com are wide open. Select from the entire portfolio to create your own concerts to enjoy on your NOXON, naturally again without any computer.

Just as simple is the availability of the media center from "Deutsche Welle" which includes for instance a variety of language courses.

mp3tunes.com offers a virtual hard drive for everyone on the internet. Upload your own songs without any limit and enjoy your music played by the NOXON all over the world via an internet connection.

Coming soon: Napster – the music flat-rate with over 6 million songs, thousands of albums, as well as artists from all genres, available for you to choose from. Create your own playlists and listen to interactive suggestions for titles from the chosen genre.

Not to forget BeSonic.com - the music portal for newcomers and underground bands. It offers the Top 10, playlists and the unique mood radio on the NOXON.
